How to update your Outlook e-signature

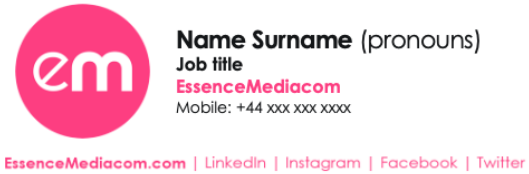

Layout options

In the Word document provided you will find four layouts for your e-signature. One version with your details only, one version with space to include any PA details, a reply version, and a mobile version. **Please do not add any other content to your e-signature.**

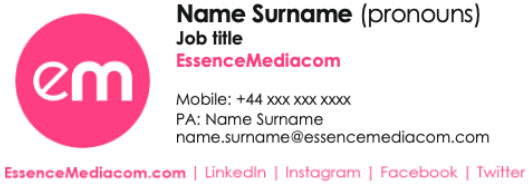

Copy and paste instructions

The most important step in adding your e-signature to Outlook is to ensure you use the **'Keep Source Formatting'** option when pasting the design into your signature.

Mobile phone instructions

We have created a simplified text version of our e-signature that you can add to your email client app on your mobile phone (iPhone and Android). We advise you copy and paste the supplied signature into an email on your desktop email client, edit the details to your own, and then email to yourself. Then open up your email client app on your phone, copy your signature from the email, and navigate to your settings and paste to update your mobile signature.

Please click here for Outlook app handy cheat sheets.
