Uhub Licensing - OpCos, Licensing and RBAC groups

- Application access
- Operating Companies (OpCos)
- Controlling Access
    - Licensing groups
    - Examples of Licensing groups:
    - Role Based Access Control (RBAC) Groups
        - Separation of privileges
        - Cross Operating Company Collaboration groups
    - Examples of RBAC groups:

Application access

We group access to applications in the following way:

- **Uhub Core (required $12USD per user/per month)**
    - Jira Software & Confluence alone with associated add-ons for both
    - Crowd - as the authentication backbone for Uhub, all Core users are licensed in Crowd. While this isn't an application users will directly use, it is needed to support the Uhub ecosystem
    - my.uhub.biz - Uhub companion application for supporting WPP agency needs around the Atlassian stack and Uhub billing/reporting needs
- **Jira Service Desk (JSD) Agents (additional $25USD per agent/per month)**
    - JSD is not considered an add-on for Jira as it is actually it's own application that works in conjunction with Jira and has a different licensing model
    - An agent license is needed in JSD for any user who will triage/respond to JSD project requests
- **Jira Service Desk (JSD) Customers (gratis)**
    - Uhub does not charge for JSD Customer only accounts
    - All users who can access JSD as a customer do require an account in Crowd - this can either be from an existing corporate user directory Uhub is integrated with, or a Crowd local account for clients/vendors where appropriate
- **Bitbucket (additional $6USD per developer/per month)**
    - Any user who can access Bitbucket needs to be licensed for Bitbucket regardless of whether they are read only, read write or managing projects/repositories
    - An agencies Bitbucket user count does not need to match their Core count, but all Bitbucket users must be licensed for Core
- **Bamboo (**$100 per month for up to 600 build minutes, contact Uhub Support for more details**)**
    - An agencies Bamboo user count does not need to match their Core count, but all Bamboo users must be licensed for Core
    - Bamboo charges are not based on the users who can login, but the build agent utilization

Each of these applications can then have internal and external users associated with them. Internal means staff within WPP (not just your agency), externals are users outside WPP.

Operating Companies (OpCos)

As explained in more detail here, an OpCo in Uhub is a term we use for a combination of a company and a geography (The OpCo UHUBNY would be the Uhub staff in New York, vs UHUBSG for Uhub Singapore). The geography does not need to directly reflect the office setup for your company though, it's more about how you're structured as a business. If you have two offices in a country, but in different cities, but those two offices are effectively all treated the same when it comes to licensing/base permissions, then the OpCo can be a single country level code. If you want to be able to see license usage by office, but you mostly work as a single team, we would create an OpCo per city, and then nest those city offices in to a single country level OpCo as well giving more flexibility.

For each application (defined above), we associate groups against Internal and External counters for billing purposes.

The licensing group/OpCo that an internal user is licensed against is determined by the office they are hired by. If OPCOA asks for a user from OPCOB to have Uhub access to work on OPCOA projects, the user will be licensed and charged back to OPCOB, and OPCOA is then able to grant them access to the relevant OPCOA projects. While billing from Uhub will always be back to the users "home office", OPCOA and OPCOB can come to any arrangement they wish for cost recovery on licensing, however this is not tracked/enabled by Uhub.

Controlling Access

Uhub uses two types of groups. Licensing groups are used by Uhub staff to determine the high watermark of licensed users for a specific operating company on a monthly basis. These numbers are then used for chargebacks to the finance teams of the operating group. Role Based Access Control (RBAC) groups are used for more granular access control and do not grant a license to use the application.

Licensing groups

For a user to be licensed in Uhub (able to login and use the relevant application), they need to be added as a direct member of a licensing group for an OpCo against that application - either internal or external. We encourage using these base licensing groups for any content that is relevant to an entire OpCo as once they're licensed correctly, they will get access to a sensible set of content.

Examples of Licensing groups:

Group	Description
UHUB-WTNYC-users	All Wunderman Thompson employees using Jira/Confluence licensed Uhub users in the Wunderman Thompson NYC office
UHUB-WUNJHB-external-users	Vendors, Clients, or Specialists outside of the WPP network requiring access to the Uhub platform
UHUB-VYRATL-bitbucket-users	All Bitbucket licensed Uhub users in the VMLY&R Atlanta office
UHUB-MIRSAN-jira test management users	All Test Management for Jira users in Mirum San Diego
UHUB-VYRSYD-jira-servicedesk-agents	All Jira Service Desk Agents in the VMLY&R Sydney office

Role Based Access Control (RBAC) Groups

While we encourage use of the licensing groups to provide access to content where possible, we understand that this is not always realistic, so RBAC groups should be used in these scenarios. RBAC groups can be used in many different ways to collaborate with other WPP agencies. See below for some use cases.

1. **Separation of privileges**
    - Allowing certain users higher levels of access to specific projects or spaces (administration, planning, project management, etc.)
    - Restricting access to specific content that may need to be kept confidential or limited to only a subset of the people in the OpCo licensing group
    - Providing minimal privileges to users who may only need to view or be notified of the progress of work being done, but not be allowed to make changes to the tasks or projects associated with that work.
2. **Cross Operating Company Collaboration groups**
    - Properly licensed users from their home operating companies can be added as required, a single RBAC group can contain members from multiple OpCos*
    - Consider the administration of the groups when assigning ownership – if administration is done by a person or team in another region, the ownership should follow the administration and rest with that other person or team

* *It is possible that users can be placed into an RBAC group but not have a license - and in this situation, they will be unable to login. While we try and limit this scenario, it can sometimes happen unexpectedly - such as if a user is licensed by OPCOA, and then OPCOB puts them in their own RBAC group, OPCOA can then de-license the user, which would revoke their access to the applications regardless of the fact that OPCOB still has the member in their RBAC group.*

Uhub historically nested RBAC groups in to licensing groups to ensure that a RBAC user could login, but as cross collaboration grew significantly, users in multiple RBAC groups could be nested in to multiple OpCo licensing groups and then their license was associated with multiple OpCos - We have now been migrating away from this approach for all OpCo teams.

Examples of RBAC groups:

Group	Description
UHUB-WTGLO-Client-LuxuryCo-Account Services	All Wunderman Thompson team members globally on the Account Services Team working on the LuxuryCo account
UHUB-VYRNA-Client-MarsBanc-Developers	All VMLYR North America Developers with Bitbucket/DevTool access for MarsBanc
UHUB-WTPRA-Vendor-FrontEndSvcs	An external vendor specializing in Front End Services for Wunderman Thompson Prague
UHUB-MDSLON-Project-BigRollout-Users	All the team members working on the BigRollout project in Jira/Confluence in Mindshare London
UHUB-ACCGLO-jira-tempo-planners	All Tempo Time Planners working for Acceleration globally
UHUB-VYRNY-Project Managers	All the Project Managers in the VMLYR New York office
UHUB-WUNJHB-GTBLATAM-Project-Managers	Project Managers in the GTB LATAM offices collaborating with WUNJHB
