Uhub Roles Overview

- Definition of Roles
  - OpCo User Role - (PMs/Designers/Developers/Associates/Interns/Strategy/Production etc)
  - OpCo Admin Role - (Stakeholders/Champions/Leadership staff etc)
- License types
- Support Matrix

Definition of Roles

Uhub users are split two basic user types: **OpCo Users** and **OpCo Admins:**

OpCo User Role - (PMs/Designers/Developers/Associates/Interns/Strategy/Production etc)

> These are team members who are licensed to their "home office" (the office they are employed by) for access to Jira and Confluence access. Bitbucket access is an additional license assignable by OpCo Admins. This group is typically named, "UHUB-OpCo-users" where OpCo is a code assigned by Uhub Support associated with the Operating Company name and location (see examples of OpCo codes below). This group is referred to as the "Uhub Core licensing group" for the operating company. Membership in this group will typically grant access to operating company specific projects used by team members of that operating company. Membership in this group consumes a license and is required to use Jira and/or Confluence.
>
> Some examples of OpCo codes include **WTSEA** for Wunderman Thompson Seattle, **GTBNA** for Global Team Blue North America, and **MIRUK** for Mirum United Kingdom.

OpCo Admin Role - (Stakeholders/Champions/Leadership staff etc)

> These are team members with elevated privileges. this role is typically assigned by membership in a UHUB-OpCo-administrators group. This role's responsibilities include:

- adding new workspaces (projects/spaces/repos) using the my.uhub.biz self service functionality,
- approvals via Uhub Service Desk,
- managing team members into existing groups,
- assuming financial responsibility for new team members receiving Uhub licenses

OpCo administrators are nearly always staff of the opco they are administering, however unlike the Core licensing groups, this is not mandatory. You may have staff from OpCo A as an administrator for OpCo B.

License types

We group licensing (access to applications) in the following way:

- **Uhub Core**
  - This provides access to Jira Software, Confluence (and associated add-ons for both)
  - Crowd - as the authentication backbone for Uhub, all Core users are licensed in Crowd. While this isn't an application users will directly use, it is needed to support the Uhub ecosystem
- **Jira Service Desk (JSD) Agents**
  - JSD is not considered an add-on for Jira as it is actually it's own application that works in conjunction with Jira and has a different licensing model
  - An agent license is needed in JSD for any user who will triage/respond to JSD project requests
- **Jira Service Desk (JSD) Customers**
  - Uhub does not charge for JSD Customer only accounts
  - All users who can access JSD as a customer do require an account in Crowd - this can either be from an existing corporate user directory Uhub is integrated with, or a Crowd local account for clients/vendors where appropriate
- **Bitbucket**

    - Any user who can access Bitbucket needs to be licensed for Bitbucket regardless of whether they are read only, read write or managing projects/repositories
    - An agencies Bitbucket user count does not need to match their Core count, but all Bitbucket users must be licensed for Core
- **Bamboo**
    - An agencies Bamboo user count does not need to match their Core count, but all Bamboo users must be licensed for Core
    - Bamboo charges are not based on the users who can login, but the build agent utilization

Each of these applications can then have internal and external users associated with them. Internal means staff within WPP (not just your agency), externals are users outside WPP.

Further information can be found at the Uhub Licensing - OpCos, Licensing and RBAC groups page.

Support Matrix

> **Contacting Uhub Support**
>
> While we will work with any Uhub team member who needs help, please coordinate questions/tasks through your local Operating Company Leads. If you aren't sure of who these are, check the Self Service section of my.uhub.biz.
>
> Some functions, such as creating projects or adding users have been made available only to Operating Company Leads. However, anyone can ask for assistance with these or any other functions using https://support.uhub.biz.
>
> Uhub encourages OpCo users to work with their OpCo administrators for any tasks the admins can help with as the turnaround will often be quicker, but it also means that discussions about how your teams are using the platform happen internally first. If an OpCo user submits a ticket to Uhub Support to change a project configuration (workflow/custom field change etc), we will revert to the OpCo administrators for discussion/approval first anyway as the value of the platform diminishes if there are a many ways of doing the same type of work.

= Unavailable to this role at this time.

= Available and can be performed using https://my.uhub.biz. Help with these is also available at https://support.uhub.biz

= Can be requested at https://support.uhub.biz and approved/actioned by a Uhub staff member
