  - Business Continuity
  - Support - Availability
  - Support - Responsiveness

Background

Uhub provides a platform, as well as services to support that platform, to the agencies within the WPP family.

As an internal business unit within WPP, we **do not sign formal contracts** with these agencies that would include any terms that govern the level of support that agencies are contractually entitled to.

In addition, there are no penalties for missing specific service level targets.

This means...

Uhub does not publish formal SLAs

That being said, we do communicate to agencies about the service, and what they can realistically **expect** of us, and strive to meet or exceed those expectations.

The below sets out to describe these expectations in a way that assures agency staff of the service levels they can expect, but is also sufficiently flexible for our team.

Platform Description

Uhub will host and maintain production and UAT environments (as well as Disaster Recovery environments as needed), including domain and SSL certificates, for each of the applications referenced below:

- Jira – details can be found here: https://www.atlassian.com/software/jira
- Confluence – details can be found here: https://www.atlassian.com/software/confluence
- Bitbucket – details can be found here: https://www.atlassian.com/software/bitbucket
- Bamboo – details can be found here: https://www.atlassian.com/software/bamboo
- Crowd – details can be found here: https://www.atlassian.com/software/crowd
- My Uhub – details can be found on the My Uhub page in Confluence.

Services Description

The Uhub team configures, monitors, and supports these systems using a SaaS-style model.
In addition, each system undergoes regular backups, in adherence to WPP's General Computing Controls.

Outages or other issues with the applications cause our team to be alerted to take immediate action via several monitoring and alerting platforms.
System status is published and provided to agency staff via https://status.uhub.biz, which can be used to subscribe to outage and other system status alerts.

Agency staff can make requests for support of the above applications and/or engage with Uhub staff by lodging a service request at https://support.uhub.biz, or by emailing support@uhub.biz.

> **Please note**
>
> While the Uhub team also support other tools, such as Atlassian Trello or Atlassian Access, as well as integrations into other systems, such as Jenkins, these aren't a part of the Uhub platform, and are not covered by any of the Service Level Expectations listed below.

Service Level Expectations (SLEs)

Category	Indicator	Description	Metric
Performance	Uhub Service Level Expectations (not SLAs)#Uptime	Time during which the applications are operational, outside of any maintenance windows. (Scheduled maintenance is managed and communicated via https://status.uhub.biz)	99.95% in any calendar month
Business continuity	Recovery Time Objective (RTO)	Duration of time within which the application(s) will be restored after a major incident.	1.5 days
	Recovery Point Objective (RPO)	Maximum tolerable period in which data might be lost due to a major incident.	24 hours

Support	Availability	Hours of operation for the Uhub support team.	24x5 during most business days, except for holidays when offices close.
	Initial response time	The time elapsed between the first request and Uhub's initial support response depends on the priority selected.	• Highest: 2 business hours • High: 8 business hours • all others: 24 business hours

Performance - Uptime

The Uhub team strives for at least 99.95% uptime over the course of each calendar month for each of the above referenced applications. This is measured and reported on for the last 90 days via https://status.uhub.biz. Scheduled maintenance will be managed and communicated via https://status.uhub.biz.

Uptime and maintenance history can be found at https://status.uhub.biz/history, and historical uptime reporting is available upon request.

Business Continuity

Uhub's RTO and RPO are described in more detail in the Data Backup section of the Uhub Data Assets and Processing page. We test our recovery processes once a quarter via refreshing our UAT environments utilizing backups of production data, as well as via occasional data restore requests. Our processes are audited by the WPP Internal audit team, and summary results of these audits can be made available

Support - Availability

The tools we provide are supported **24 hours a day, 5 days a week**.
There are some exceptions to this - generally due to local holidays, during which the agency offices where our support team are based are closed.
You can find a schedule of these days, as well as the associated impact on support response here.

Support - Responsiveness

During the support availability hours referenced above, the Uhub support team will strive to respond to most support requests that are marked as **Highest** priority within **2 hours**, and High priority items within **8 hours**. Most other requests will be attended to within 24 hours.
Some caveats on the above include:

- The Uhub team reserves the right to downgrade support requests from **Highest** priority to other priorities following an initial evaluation.
- The time a support request spends in the **Waiting for Customer** status does not count towards the total time to resolution.
- Certain support requests should really be classified as projects. These request types will typically take longer to resolve, and will not count against the SLA measurements the Uhub team track.

Uhub's management regularly review reports of responsiveness, aged requests, and other Service Desk metrics, some of which can be shared upon request.
