SLA Scorecard

Contratado

Disponibilidade da Aplicação

>= 99.5%

Chamados – Sev 1

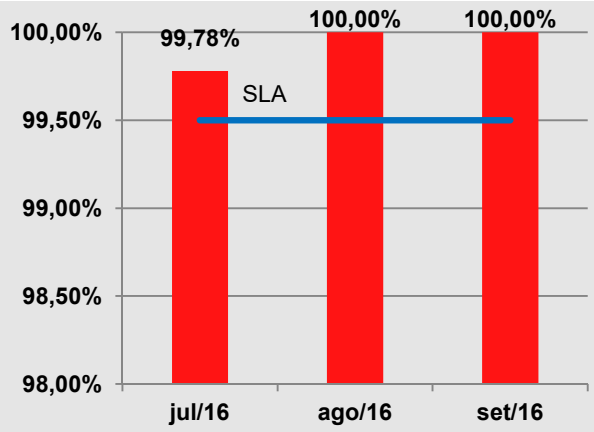

90% dos chamados resolvidos em menos de 4 horas para Unplanned Outage.
Ou 24 hours para Service Interruption (Falha funcional)

Chamados – Sev 2

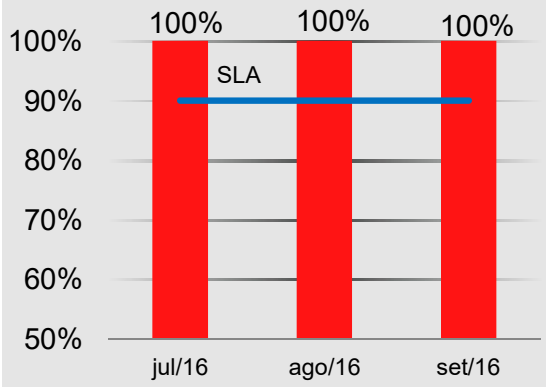

90% dos chamados resolvidos em menos de 96 horas

Alcançado

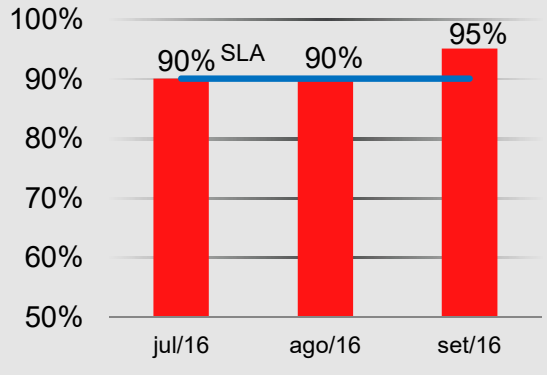

Disponibilidade (Siebel)

Chamados – Sev 1

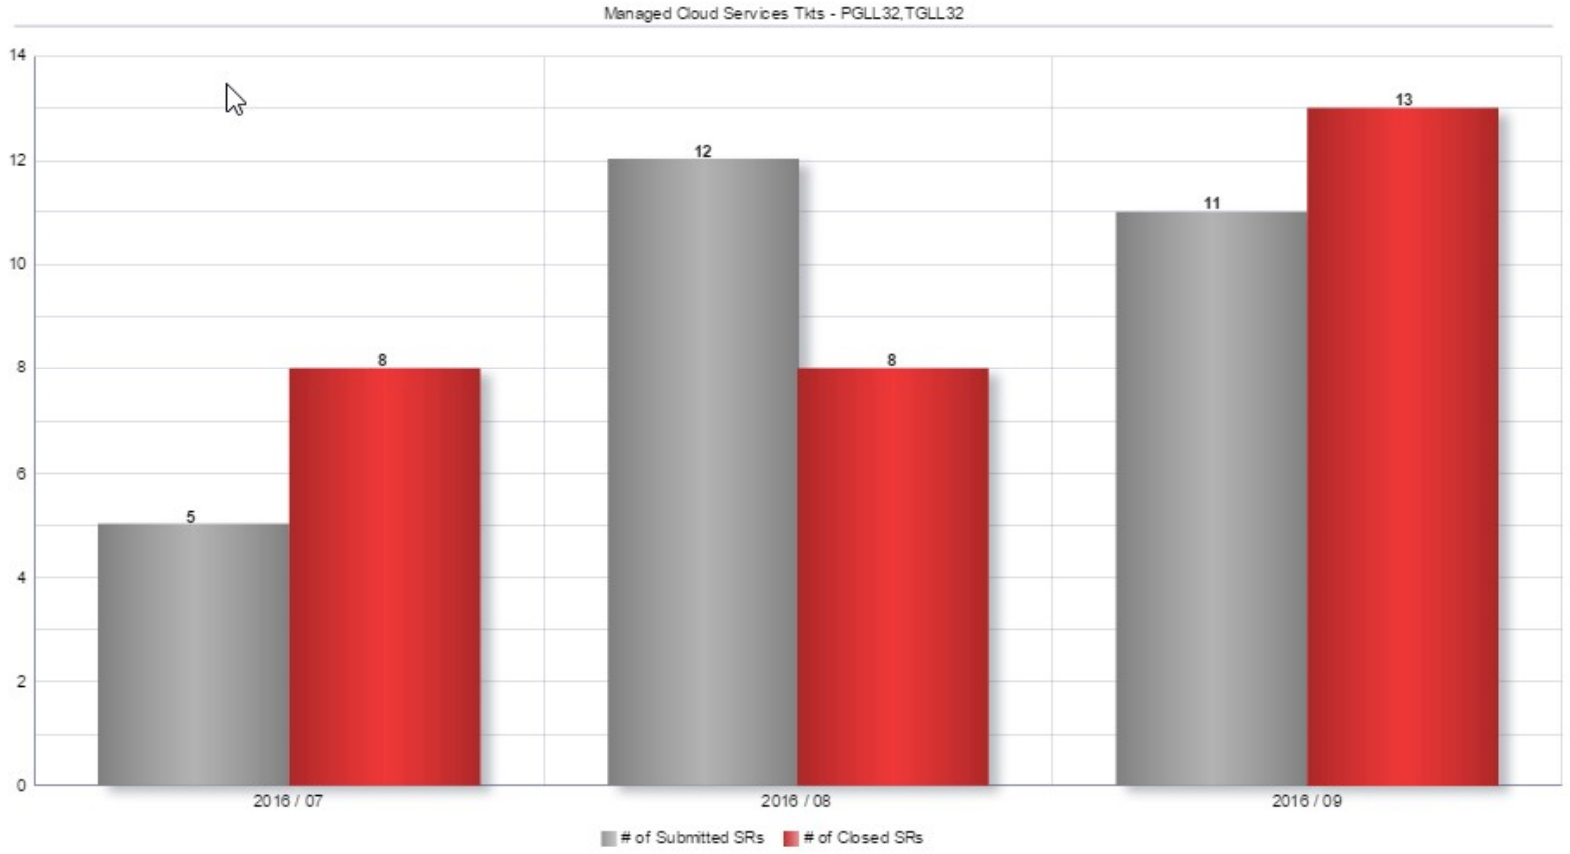

Chamados – Sev 2

Gerenciamento de Problemas – Siebel Setembro

Begin	End	Total Time	Type	SR#	Issue/Resolution	Business Impact to Customer	Additional Information?	Status
Sep 21, 2016 04:45:16 PM BRT	Sep 22, 2016 01:01:16 AM BRT	08h16m 00s	Service Interruption	3-13369136221	Problem Info: On 21st September 2016 at 3:10pm CDT, multiple alerts were received by the Command Center (CC) to state that application instances hosted in Zones 43/46/15/39 at the Austin data center (ADC) were unreachable. The CC team was immediately engaged to investigate and determined that the df –k was hanging on the affected virtual hosts. In addition the ILOM console was non-responsive. A level 1 bridge call was initiated with participants from the Network and Storage teams. Action Performed: During initial troubleshooting, the Network team determined that the virtual hosts were unable to reach their respective filer appliances through the OPUS zone routers: adcq6-z46-rtr-1/2 and aggregate routers: adcq6-agg-rtr-1/2. Then network engineer performed a rolling 'restart' of the interface ports between both routers pairs after which connectivity for application instances was restored back.	Customer couldn t execute commands at OS level. Some of the EDI processing files (mostly oflline) couldnt be processed. Impact was low as it happened closer to offbusiness hours and extended thru the night.		Validated/restored affected instances and performed health checks. -Reviewed and Closed.

Tempo Total de Todos os Incidentes	8:16 h
