Creative Futures – una capacidad para construir breakthroughs dentro de la nueva economía de la comunicación.

¿What is Creative Analytics?

Through the application of AI, Creative Analytics optimizes creatives performance before a single impression is delivered, driving up to +50% more digital effectiveness with a minimum of six months of historical data from the ad server.

BREAKTHROUGH INSIGHT

Running the most relevant creative transforms the performance of plans, however **75% of media is invested behind underperforming ads.**

THE **EM** DIFFERENCE

A suite of AI-powered creative analytics **solutions;** allowing us to optimise creative before a single impression is served - driving up to 50% more media effectiveness.

emCreativeDashboard

Entry-level CA solution to extract and visualize creative performance data in a highly configurable UI

emCreativeModelling

Build predictive CA models trained on 400+ attributes to learn what drives creative effectiveness at scale

emCreativeConsulting

Premium CA service offering aimed at delivering fully custom client analysis to maximise creative uplift potential

emCreativeDashboard

(Creative Analytics)

How can I gain quick insights for creative inspiration or for in-flight optimisation?

How it looks

Data Requirements

No minimum ad volume requirements.

Requires ad-server integration: CM360, DV360, Meta Business Manager, Flashtalking, Amazon, Adform. (new connectors are available on request)

Formats: Static, HTML5, Video, Paid & Organic Social, (DCO coming Q4'23)

Metrics: CTR, VTR, Conversion Rate, ROAS. (no offline data)

Labels: objects, text, people, logos, CTAs, labels, colours, size & position, plus our proprietary AI attention scores, linguistic scores, DE&I scores, etc. over 400+ total.

Raw emCreativeDashboard data can be used as the basis for **emCreativeModelling** or **emCreativeConsulting** projects

What it does

Our entry-level creative modelling solution visualises large amounts of historic or real-time creative performance data from multiple sources and formats against any ad-server metric, allowing licence holders to quickly see:

- **Differences** by campaign, country, platform, format, size, etc.
- **Segment by audience** to identify content themes that are trending
- Which creative elements are getting noticed with **visual probability hotspots**
- Whether there is **overinvestment** in certain ads or **underutilised creatives**?
- Highly **granular details** for any single ad.

How does it do it

Our proprietary technology stack uses computer vision AI to extract and label creatives with over 400 visual attributes, such as objects, colours, people, text, attention scores, etc…

Attributes are linked to historic media performance from the last 1-2 years of client ad-server data. **All of this data is then presented in a highly configurable UI for further exploration by dashboard license holders.**

How is it different

emCreativeDashboard offers its users an open and highly configurable environment with access to the **widest range of AI data sources** – and we are constantly adding new and unique modular features such as:

- Objects with High Visual Hotspots
- Brand & partner logos, size, position
- Detect and analyse prominent text
- Detect key phrases and CTAs
- Use of People + Celebrities
- Detect Emotions: Happy, Calm etc.
- **Age & Gender Representation**
- Colour theory etc…
- **Or create your own Custom Classifiers**

The dashboard offers historic or real-time views making it perfect for creative inspiration or for **in-flight optimisation,** and is impressive for use in pitches.

emCreativeModelling

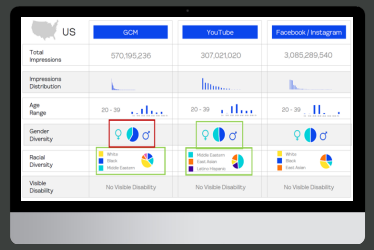

(Creative Analytics)

How can I rapidly understand and predict what drives creative performance at scale?

How it looks

Data Requirements

At least 60+ ads required for 75% statistical significance.

Requires ad-server integration: CM360, DV360, Meta Business Manager, Flashtalking, Amazon, Adform. (new connectors are available on request)

Formats: Static, HTML5, Video, Paid & Organic Social, (DCO coming Q4'23)

Metrics: CTR, VTR, Conversion Rate, ROAS, Brand Lift Scores, Offline Sales.

Labels: objects, text, people, logos, CTAs, labels, colours, size & position, plus our proprietary AI attention scores, linguistic scores, DE&I scores, etc. over 400+ total.

We recommend one model per channel per market (or region) for each distinct KPI e.g. VTR.

What it does

This is our mid-tier creative modelling solution that identifies top and bottom creative performance drivers through Machine Learning, allowing users to extract valuable answers to pre-defined questions such as:

- What **visual elements** work vs don't work to drive Clicks, Views, Sales, or **Brand Lift?**
- What design elements get more **attention** and how to optimise for this?
- How does **language** affect performance?
- Is a new ad **predicted** to work?
- Did a campaign meet **DE&I** criteria?

How does it do it

Our proprietary technology and data science methods use computer vision AI to extract and label creatives with over 400 visual attributes, such as objects, colours, people, text, attention scores, etc…

Attributes are linked to historic media performance from the last 1-2 years of client ad-server data. **Automated creative performance modelling is executed within our cloud-based ML modelling environment and key findings are rapidly produced.**

Key findings are presented in a graphical format with companion explanation deck.

From Q2'23 automated modelling will also feature within the **emCreativeDashboard**.

How is it different

emCreativeModelling provides client teams with an ever-growing range of semi-automated advanced analytics models that are **unique to EM and WPP** clients:

- video brand lift prediction (EM exclusive)
- linguistic scoring for ad copy (EM exclusive)
- causal modelling (WPP exclusive)
- diversity & inclusion scoring (WPP exclusive)
- category benchmarking (coming Q1'24)

It's **built for rapid results**! This modelling work focuses on providing accuracy at speed against a pre-defined creative questions. It is possible to **re-run previous custom analysis** produced via emCreativeConsulting to reduce cost and increase scalability.

Where enough historic data is available, we offer **creative pre-testing** to validate new ads vs. historic data, either to make direct creative interventions or optimise spend & bid allocations.

These models are **highly portable** including to DCO authoring platforms such as Hogarth, to Choreograph for benchmark creation, or even to generative AIs in the near future…

(Creative Analytics)

How can I establish highly valuable bespoke creative recommendations to drive maximum performance?

How it looks

Data Requirements

At least 300+ ads required for 95% statistical significance.

Requires ad-server integration: CM360, DV360, Meta Business Manager, Flashtalking, Amazon, Adform. (new connectors are available on request)

Formats: Static, HTML5, Video, Paid & Organic Social, (DCO coming Q4'23)

Metrics: CTR, VTR, Conversion Rate, ROAS, Brand Lift Scores, Offline Sales.

Labels: objects, text, people, logos, CTAs, labels, colours, size & position, plus our proprietary AI attention scores, linguistic scores, DE&I scores, etc. over 400+ total.

We recommend one model per channel per market (or region) for each distinct KPI e.g. sales.

What it does

This is our premium creative modelling service, aimed at delivering fully custom creative analysis to maximise media performance potential to enable you to:

- Understand and **explain creative performance** for all historic ad served media.
- Greatly **reduce creative wastage** and unlock added value in every media plan.
- Work with creative agencies to **make better performing ads**, messages & layouts.
- Identify rich territories for **new content development**.
- Ultimately, **predict creative performance** before a single impression is served.

How does it do it

Our proprietary technology and data science methods use computer vision AI to extract and label creatives with over 400 visual attributes, such as objects, colours, people, text, attention scores, etc…

Attributes are linked to historic media performance from the last 1-2 years of client ad-server data. **Custom creative performance modelling is performed by teams of highly trained data scientists to understand the unique effects for this client**.

These effects are described in a detailed recommendations deck for distribution to client and creative production teams along with in-market test and learn frameworks.

How is it different

emCreativeConsulting is a **people-powered** advanced analytics product with five global delivery teams across EM Analytics & Insight, aimed at clients and their creative teams.

We offer the **widest range of AI data sources** and **bespoke creative hypotheses** meaning we offer the most complete creative analytics solution available in the marketplace.

Our consulting work is focused on providing fully comprehensive and **highly descriptive** creative recommendations, which are written to directly **inform the creative development process** in the upstream marketing cycle.

Our consulting process is highly collaborative and **includes the creative agency** in the creative hypothesis development. We find this improves adoption of our findings leading to increased creative and media performance.

This product also integrates particularly well with **Addressable Creative**, whereby our findings can be used within DCO production.

We integrate with media teams, so we can inform & help to design A/B incrementality tests to validate our findings live in market.
