FACEBOOK VIEWABILITY/FRAUD SIVT & BRAND SAFETY/SUITABILITY

Facebook Services

1. Activate viewability/fraud & brand suitability measurement

2. Utilize DV's Brand Safety & Suitability solutions to avoid inappropriate content on Facebook via automated Allow and Block Lists.

While a Facebook Profile is needed to specify Brand Safety & Suitability settings, Facebook does not need to be added as a partner to your DV Blueprints.

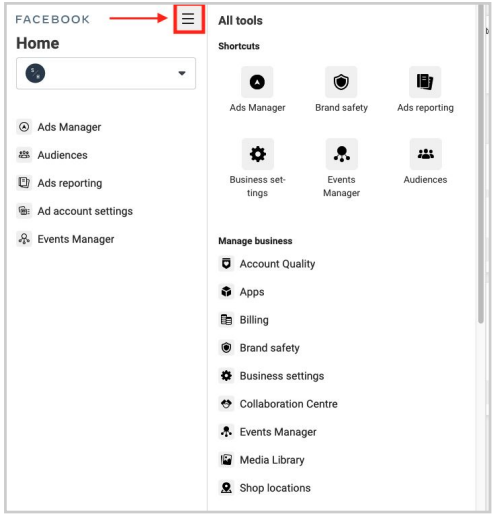

Facebook Brand Suitability List Coverage:

	In-Stream	In-Stream (Reserve)	Facebook Audience Network (FAN)	Instant Articles
Facebook Content Allow Lists	✓	×	×	×
Facebook Block Lists			✓	✓
In-Stream Reserve Block Lists	×	✓	×	×

Activating DV Measurement On Facebook Campaigns

Step 1: In Facebook Business Manager, navigate to your Ad Account. On the top left, click on the three horizontal lines to access the menu.

Step 2: Navigate to the Ad Accounts section and select the correct Ad Account you want to assign a Partner to and click Assign Partner.

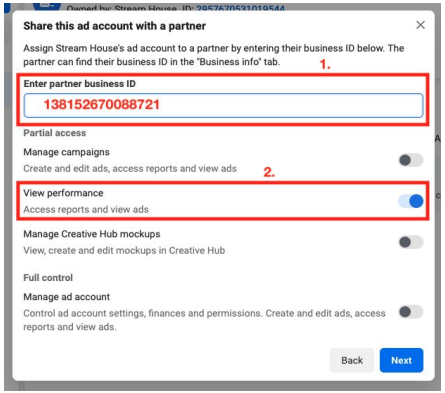

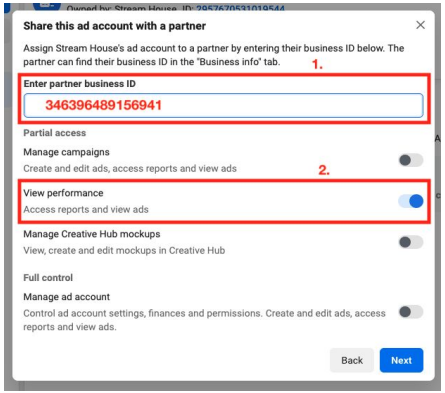

If the ad account has been shared from another Business Manager, therefore your permissions are not eligible to *Assign a Partner*, please contact the Ad Account owner to complete activation.

Activating DV Measurement On Facebook

Step 3a: Enter DV's Viewability Business ID (**138152670088721**) in the Partner Business ID field and toggle View performance.

Step 3b: Enter DV's Brand Safety Business ID (**346396489156941**) in the Partner Business ID field and toggle View performance.*

To leverage DV's FB brand suitability reporting & pre-screen,* ***viewability measurement is required.*

Step 4: Send all Facebook Account Names and Account IDs to your DV Account Manager

This integration is activated at the Facebook Ad Account level.
All eligible campaigns under the account will be activated for measurement.

Activating Facebook Brand Suitability Within Pinnacle:

Step 1: Understanding which List to use

- Applicability of the Facebook Brand Safety & Suitability lists is based on Facebook Placement Type.
- Your Facebook Profile settings will be used to create Facebook Content Allow Lists, Facebook Block Lists, and/or In-Stream Reserve Block Lists.
- **DV does not recommend using a Content Allow List and an In-Stream Block List on the same Ad Account** - doing so will decrease the available In-Stream Inventory and may impact costs / reach.

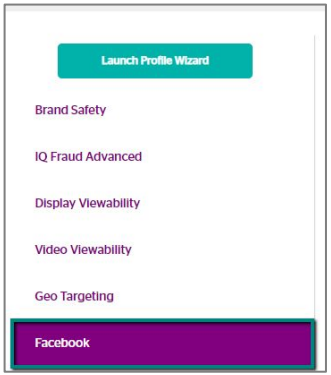

List Benefits:

	Requires Client to upload list to Facebook Business Manager	**Requires Client to apply list to Ad Account *(one-time)***	**Frequency of list updates *(executed by DV automatically to Facebook Business Manager)***	**Granularity-level of classification and application of the lists**
Facebook Content Allow Lists	✗ (No, executed by DV)	✓	12x a day	Video-level
Facebook Block Lists		✓	1x a day	Publisher-level
In-Stream Reserve Block Lists		✗	1x a month	

Activating Facebook Brand Suitability Within Pinnacle:

Step 2: Creating a Facebook Profile

1. Navigate to the Facebook Profile section within IQ Blueprint and select “Add New”
2. Build out your Facebook Profile and apply it to the respective Line of Business/Brand.
    - ***Please note*** - you must have one Facebook Profile per Line of Business.
    - DV Facebook Profiles cannot be shared or applied to multiple LOB/Brands.
3. Notify your DV Account Manager that the Profile has been created and which list you’ve chosen.

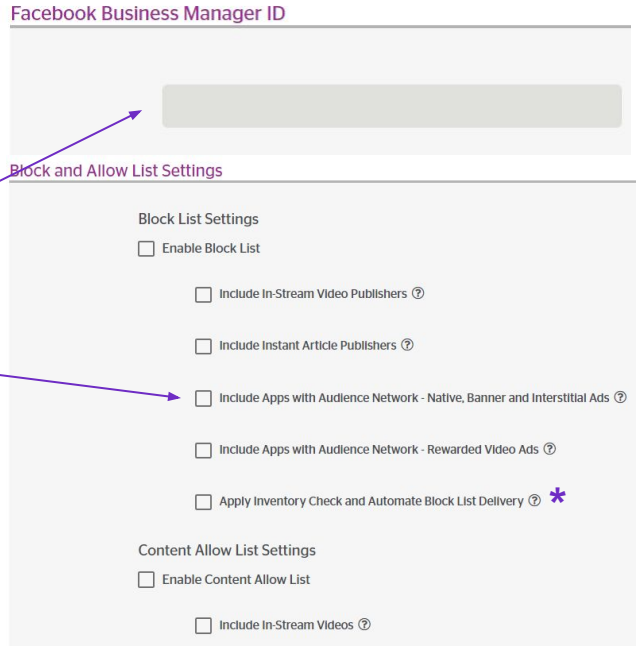

Facebook Profile Components

- Facebook Business Manager ID
- Block List vs. Allow List Settings
- Domain List
- Site Content
- App Lists
- App Store Content
- Facebook Page Lists
- Fraud/SIVT [App]

Activating Facebook Brand Suitability Within Pinnacle:

Step 3: List Activation

1. Standard Facebook Blocklist Activation [not including ISR]
    a. Enter your numeric Facebook Business Manager ID.
    b. Select “Enable Block List” and select the placements that you want included in your Block List.
        i. **Reminder:** DV does not recommend using an In-Stream Block list with a Content Allow List at the same time.
    c. DV will automatically share the Block Lists to your Business Manager within one day of opting-in.
        i. If lists are not surfaced in Business Manager within one day, please confirm that you have added the correct Business Manager ID.
    d. Apply the Block Lists to the appropriate Ad Account.
        i. Once initial application is complete, DV will refresh block lists automatically once a day.

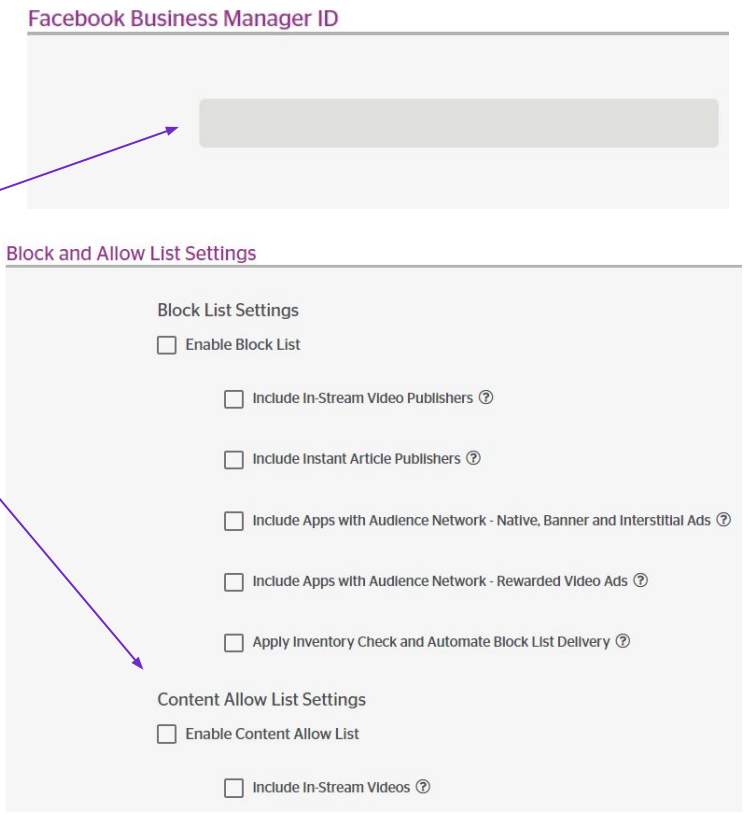

* To activate automated list delivery, **applying an inventory check is required.** This check ensures that your list is consistently below the placement limits implemented by Facebook.

Activating Facebook Brand Suitability Within Pinnacle:

Step 3: List Activation

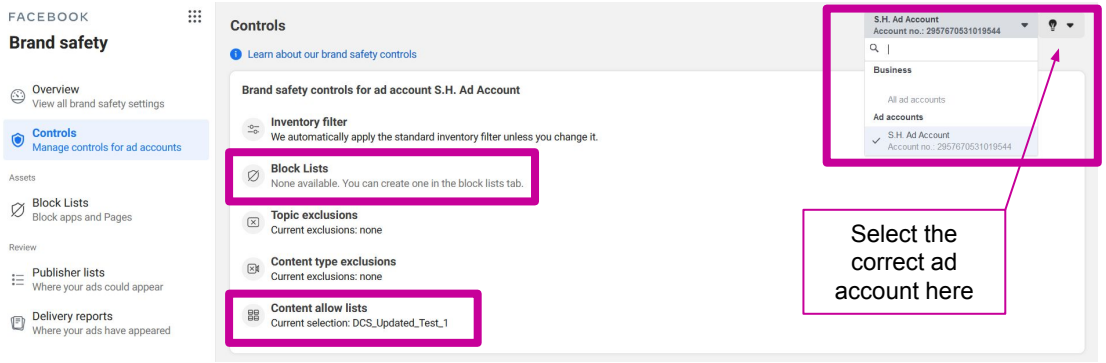

2. **Facebook Content Allow List Activation**
   a. Enter your numeric Facebook Business Manager ID.
   b. Select “Enable Content Allow List”
   c. DV will automatically share the Content Allow Lists to your Facebook Business Manager within one day of opting-in.
      i. If you do not see them in your Business Manager within one day, please confirm that you have added the correct Business Manager ID
   d. Apply the CALs to the appropriate Ad Account.
      i. Once initial application is complete, DV will refresh allow lists automatically 12x a day to ensure that new suitable videos are continuously added.
3. **In-Stream Reserve Blocklist Activation**
   a. Notify DV Account Manager to activate your ISR Block List.
   b. DV will work with the Facebook Operations team to apply the list to your Ad Account and refresh the ISR Block List 1x a month.

Activating Brand Safety & Suitability Within Facebook

Uploading the Lists

- Navigate to the Brand Safety section under the Business Settings and then select the relevant list section.
- Apply the Block Lists and/or Content Allow Lists to your Ad Accounts running **In-Stream, Instant Articles, or FAN**
    - DV does not recommend applying the Block List to an Ad Account already utilizing a Content Allow List - doing so will decrease the available In-Stream Inventory and may impact costs / reach.

For more detailed instructions on how to apply lists, please reach out to your DV Account Manager for the dedicated Facebook Brand Safety & Suitability Activation Guide.

DoubleVerify

YOUTUBE VIEWABILITY/FRAUD SIVT & BRAND SAFETY/SUITABILITY

Activating DV Measurement & Pre-screen

Operationalize

Work collaboratively with your account team to:

- Establish IO terms for campaign activation
- Build a YT Profile (IQ Blueprint)

Implement

Exchange campaign account information including:

- Google Ads CID linkage* and account names/IDs
- Apply your pre-screen targeting and VCID

Activate

Confirm details with your account team including:

- Native audience targeting & setup parameters
- Establish touch points including reporting cadence

Optimize & Measure

Access Pinnacle to review results in real time:

- Campaign performance & alignment
- Fine tune targeting & evolve campaign set up
- Discuss products & features that help meet/ exceed your benchmarks

Billing & Renewals

Expect to receive 2 separate invoices for pre-screen + measurement services in 2022:

- Campaign level or consolidated measurement invoices are available
- Pricing will be based on terms within respective existing & new contracts

DoubleVerify

**DV360 clients must set up automated reporting for campaigns on a monthly basis to actualize billing + be eligible for reporting*

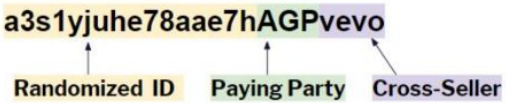

Activating DV's YouTube Measurement Integration

Step 1. Obtaining a Vendor Client ID

Work with your dedicated DV Account Manager to request your *Vendor Client ID*. **This ID is required to activate DV services and must be input at the point of activation**.

- **VCIDs** are built as a unique combination of your buying settings, specifically the Brand, Paying Party & Cross-Seller (if applicable)

For example -
- Advertiser - Advertiser A
- Paying Party - Agency Pay
- Cross-Seller Name - Vevo

- ***Please Note*** *- If you have a new combination of settings, you must request a new VCID from your DV AM*

YouTube does not need to be added as a partner to your DV Blueprints. The integration operates outside of the standard workflow.

Activating DV's YouTube Measurement Integration

Step 2 - Work with YouTube to Activate and Share Account Info with DV

- **Google Ads -**
  - Submit a request to Google Support for one-time account-level configuration.
    - Select account-level third party measurement vendor configuration and provide the VCID.
    - The account-level configuration only makes the measurement visible in the campaign setting page. It does not actually enable third party measurement for each campaign themselves.
  - Self-enable measurement on campaigns.
    - In Google Ads, navigate to Campaign settings > Additional Settings > Third-party measurement
    - Add *Vendor* > Select *Measurement Type* > Vendor Client ID will be pre-populated
    - Only one VCID for one measurement-vendor combination is supported per account

Once the YouTube representative confirms the campaigns have been activated for measurement, send the YouTube Advertiser ID, Campaign ID, and Line Item ID to your dedicated DV Account Manager.

*Please note - Vendor Reporting ID is **not** required for activation.*

Activating DV's YouTube Measurement Integration

Step 2 - Work with YouTube to Activate and Share Account Info with DV

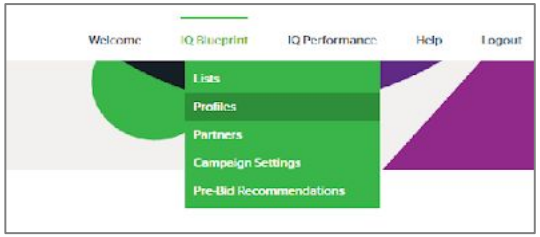

- **DV360**
  - Contact Google support to enable third-party measurement and provide the VCID for each requested measurement service.
  - Once third-party measurement is enabled, activate measurement for the individual TrueView line items by navigating to *Additional settings > Line Item Details > Third-party vendors.*
- **Google Ad Manager (Partner Sales)**
  - Contact your Partner with the VCID provided to you.
    - Ensure you are using the VCID created specifically for campaigns run with each partner.
  - The Partner must enter the VCID in the Viewability Client ID section of the *Order settings*.
- **YouTube Reserve (Direct)**
  - Please reach out to your Google representative with the VCID provided to you by DV.

Once the YouTube representative confirms the campaigns have been activated for measurement, send the YouTube Advertiser ID, Campaign ID, and Line Item ID to your dedicated DV Account Manager.

*Please note - Vendor Reporting ID is **not** required for activation.*

YouTube Brand Safety & Suitability Activation

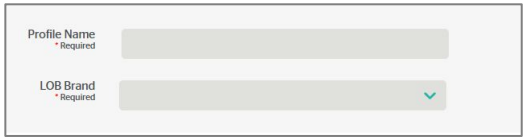

Step 3: Creating the DoubleVerify YouTube Profile

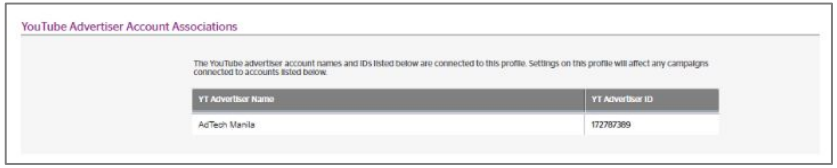

Step 1: Navigate to the IQ Blueprint dropdown in Pinnacle & select Profiles

Step 2: Navigate to the YouTube Profile & select “Add New”

Step 3: Choose a name for the Profile & select which Line of Business* the Profile should be applied to.

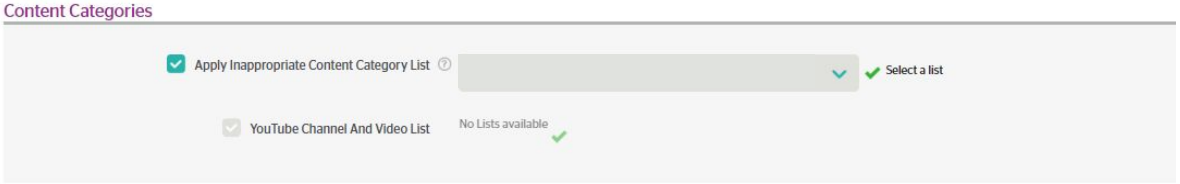

Step 4: Verify the External Accounts tied to the Line of Business. If these accounts do not look correct, please reach out to your DV Account Manager.

***Please note: There is a maximum of 1 Profile per LOB. Profiles cannot be shared across LOBs.**

YouTube Brand Safety & Suitability Activation

Step 3: Creating the DoubleVerify YouTube Profile (cont.)

Step 5: Confirm which Lists you want to apply.

Inappropriate Content Category List – You can use your already built Brand Safety Inappropriate Content List. Categories on this list will generate incident reporting as long as they're supported for measurement via the YouTube Brand Safety & Suitability integration.

YouTube Channel & Video Override List – You can build a new list in the List section of the platform, consisting of YouTube video & channel ids. This list will allow you to override Brand Safety and Suitability category settings for specific Videos or Channels. All ids on this list will not generate incidents in YouTube reporting.

Step 6: Review the Profile & Save (in the lower right hand corner) when complete.

Brand Safety and Suitability on YouTube

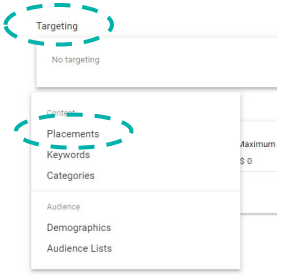

- DV extends its industry-leading classification to the YouTube platform, offering 76 unique Brand Safety & Suitability settings and support of 40 languages, across desktop, mobile and CTV.
- DV's Brand Safety & Suitability reporting service provides advertisers with video-level insight into the safety & suitability of the content on which their video advertising is run.
- Advertiser's can leverage the channel & video level reporting to generate exclusion lists which can be applied within the Google buying platform.

Note: *Incidents tied to Brand Safety Floor will be flagged as Brand Safety incidents. Incidents tied to Brand Suitability categories will be flagged as Unsuitable incidents. Please work with your AM to learn more about how to generate incident reports.*

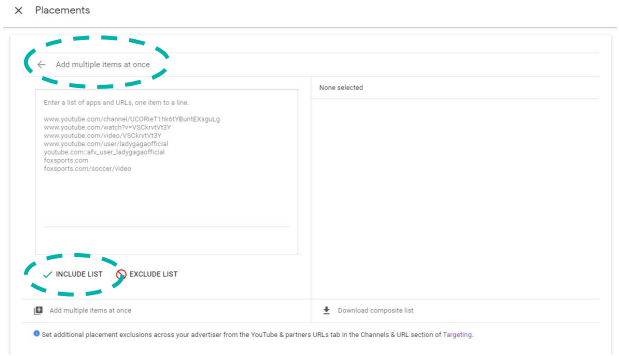

Activating YouTube Pre-screen Suitability

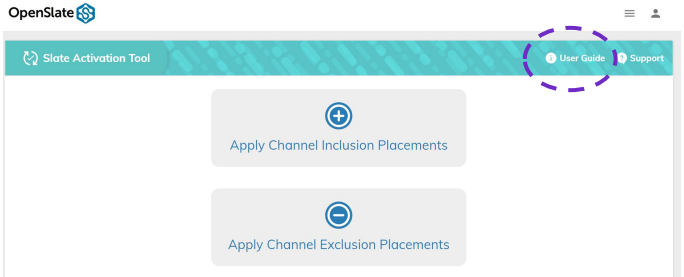

2 Steps (DV360): Ad Group, Targeting & Placements

Step 1: Under Each Ad Group >> Scroll to *Targeting* >> Select *Placements. (The pre-screen placements will need to be applied to each ad group)*

Step 2: Under Placements >> Select *Add Multiple Items At Once* >> Copy & Paste the channel placements from the "Inclusion Targeting" tab>> Select *Include List*

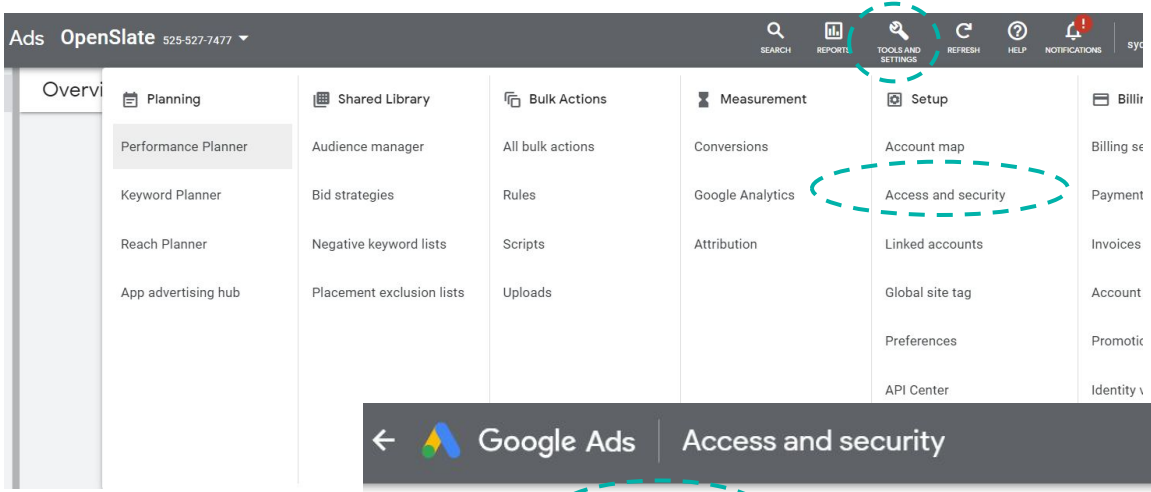

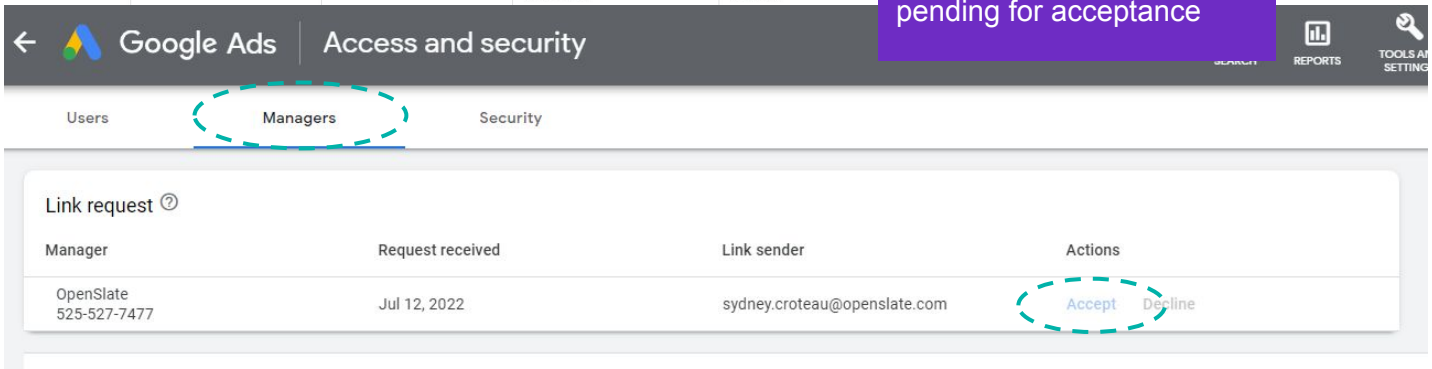

For multiple ad groups, clients can opt to use our DV360 YT Pre-Screen Activation Tool.
A complete step by step guide on how to apply pre-screen targeting using the DV360 YT Pre-Screen Activation Tool can be found on the User Guide.

Activating YouTube Pre-screen Suitability

Accepting Google Ads CID Link Requests

Step 1: Within the Google Ads Account, select Tools & Settings > Access and Security

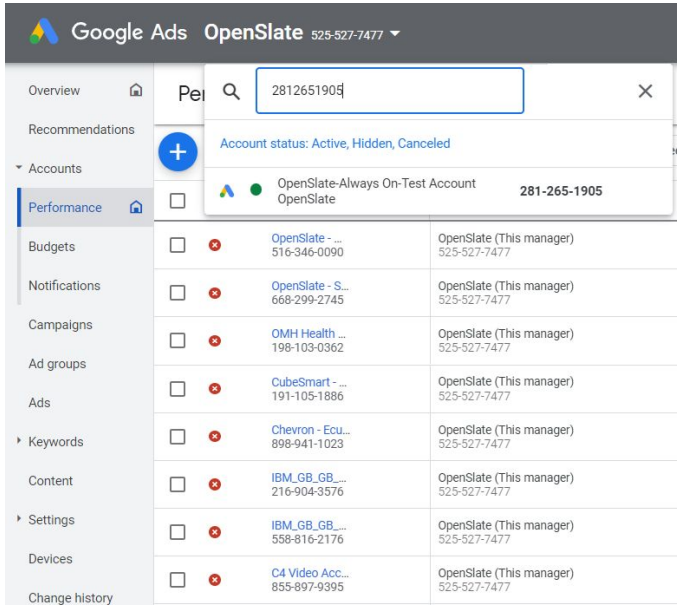

Step 2: Under Managers, the link request will be pending for acceptance

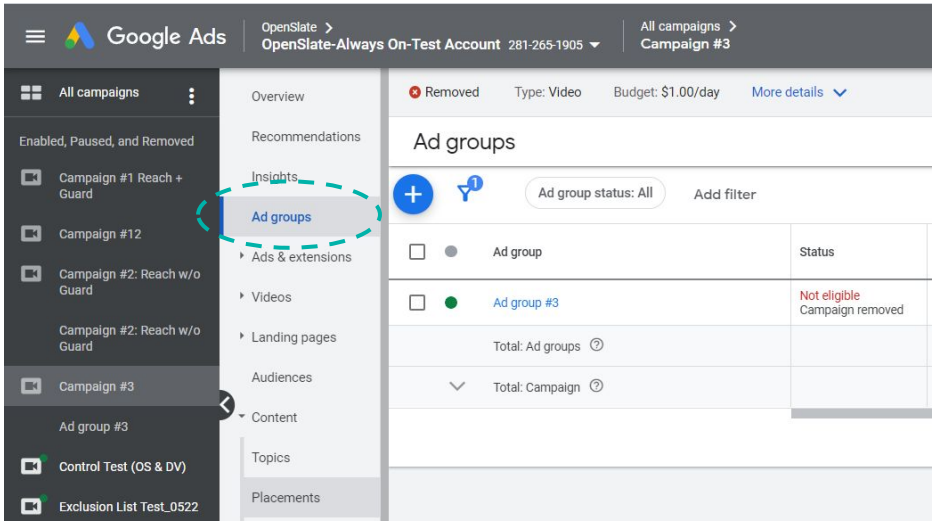

Activating YouTube Pre-screen Suitability

Pre-screen Suitability Implementation

Step 1: In Google Ads, navigate to the specific campaign CID.

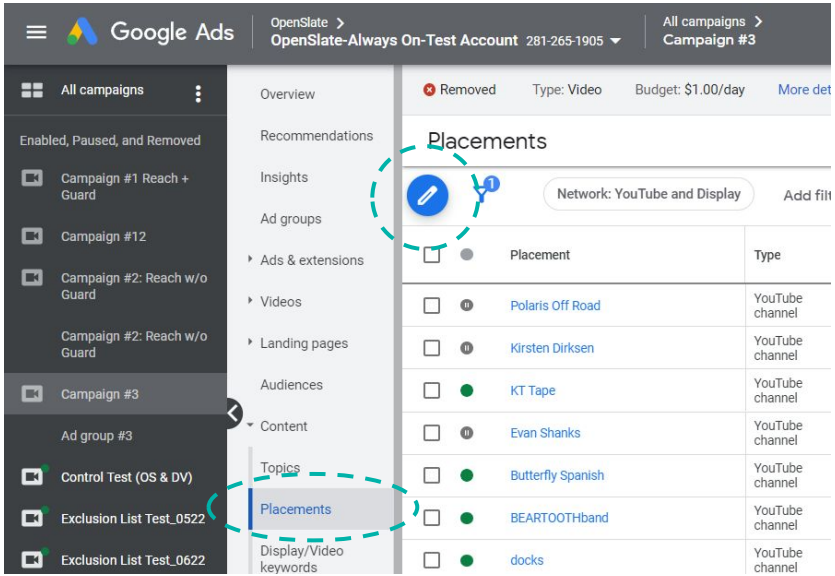

Step 2: Within that CID, the pre-screen placements will need to be applied to each ad group.

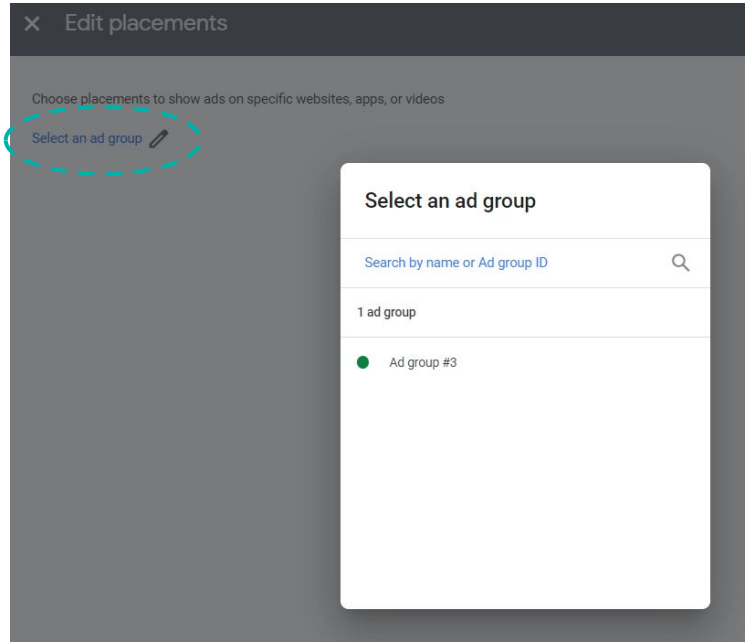

Activating YouTube Pre-screen Suitability

Pre-screen Suitability Implementation

Step 3: Within each ad group, under *Content*, select *Placements* and the small pen to edit

Step 4: Select the ad group again that the placements will be applied to

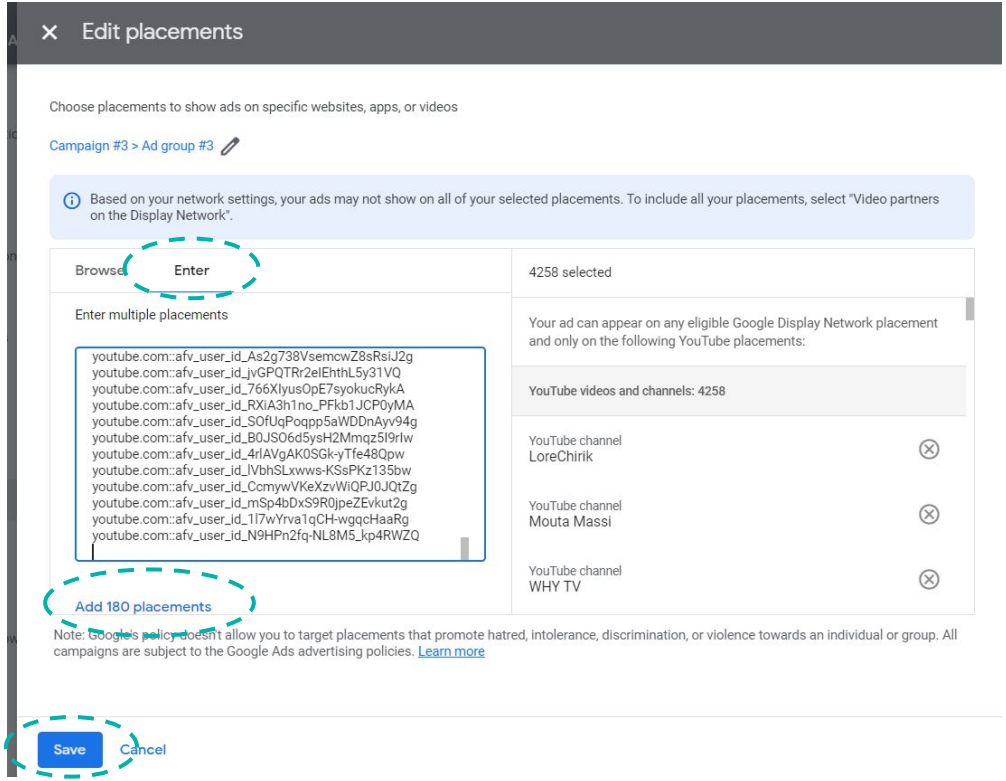

Activating YouTube Pre-screen Suitability

Pre-screen Suitability Implementation

Step 5: Select *Enter* and paste up to 5K channels at a time.

Step 6: Select *Add Placements* and once the placements have been added select *Save*.

Best Practices

Recommendations when building Google Ads & DV360 campaigns

- Under *network settings*, select “YouTube videos” only. DV YT pre-screen suitability targeting does not apply to Display, Search & Discovery ad units.
- Under *language settings*, select “English” (not ‘All Languages’).
- Keep additional targeting as broad as possible - tight targeting (i.e. remarketing, geo-targeting, narrow demo-targeting) will constrain delivery.
- The “Standard Inventory” setting is recommended for *Inventory Type.*
- If demo targeting (age &/or gender) is required, we recommend including “Unknowns” when possible to increase scale.
- Re-evaluate the use of frequency caps where possible.
- Include recommended exclusions, continue to leverage Google brand safety options.
- Keep fluid budgets to ensure scale and delivery of full campaign budget.
- Use competitive bids to maximize your chances of winning the auction.
- Consolidate lines into Ad Groups when possible, splitting budgets can restrict scale.
- Expect to bid competitively (higher than in the past) as better quality can create scarcity and/or come at a premium

DoubleVerify

TWITTER VIDEO VIEWABILITY/FRAUD SIVT

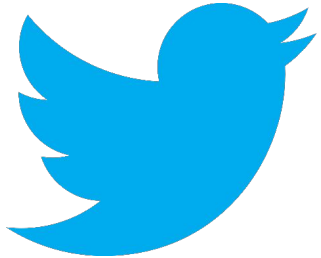

Twitter Activation Overview

1. Contact your Twitter representative to unlock your Twitter accounts for video viewability measurement.

2. Once unlocked, add DV_measurements as a measurement partner.

3. Send your DV AM your Twitter Account details.

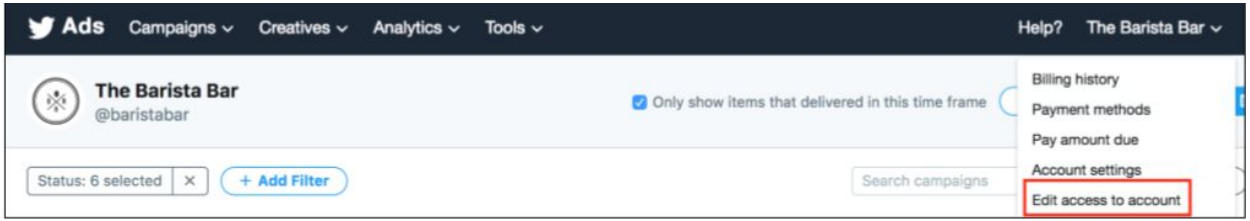

Please indicate the DV Line of Business, Paying Party & whether or not a Partner will need access to the data.

Twitter does not need to be added as a partner to your DV Blueprints. The integration operates outside of the standard workflow.

Activating Video Viewability & Fraud/SIVT Measurement Within Twitter

Step 1: Once unlocked, go to ads.twitter.com and navigate to “Edit access to account” from your account dropdown menu

Step 2: Select “Add Access”

Activating Video Viewability & Fraud/SIVT Measurement Within Twitter

Step 3: In the dropdown menu, select “Measurement partner”

Step 4: Enter “DV_measurements” into the search box and select DV Measurement as the partner, then hit “Save changes”

This integration is activated at the Twitter Account level.
All eligible campaigns under the account will be activated for measurement.

DoubleVerify

SNAPCHAT VIDEO & DISPLAY VIEWABILITY/FRAUD SIVT

Snapchat Activation Overview

1. Identify which Snapchat Ad Sets should be activated for measurement.

2. Activate the DoubleVerify Viewability/Fraud SIVT integration in Snapchat Ads Manager.

3. Send your DV AM your Snapchat Account details.

Please indicate the DV Line of Business, Paying Party & whether or not a Partner will need access to the data.

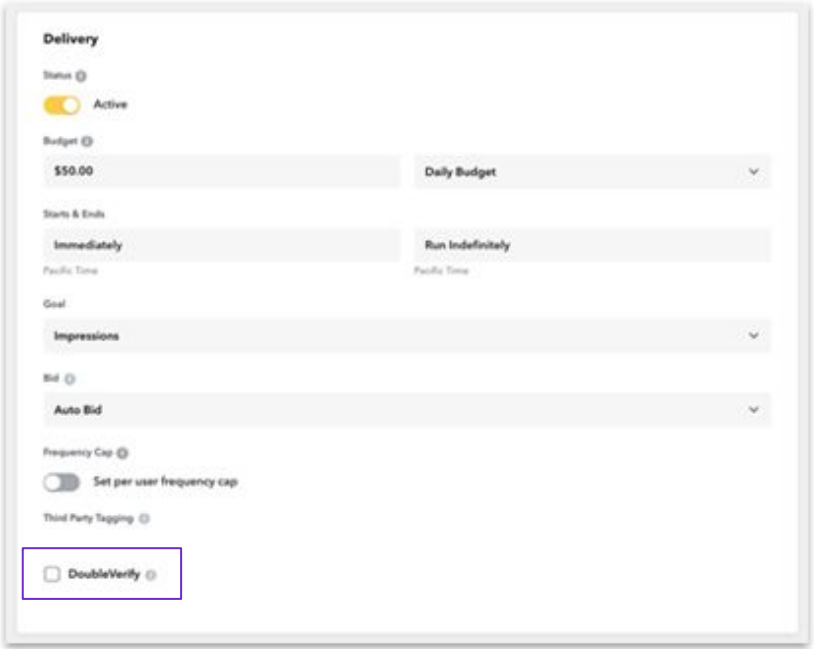

Snapchat does not need to be added as a partner to DV Blueprints. The integration operates outside of the standard workflow.

Activating Viewability & Fraud/SIVT Measurement Within Snapchat

Step 1: During the Snapchat campaign creation process, navigate to the ad set in the Create Ads flow. You can also edit an existing ad set.

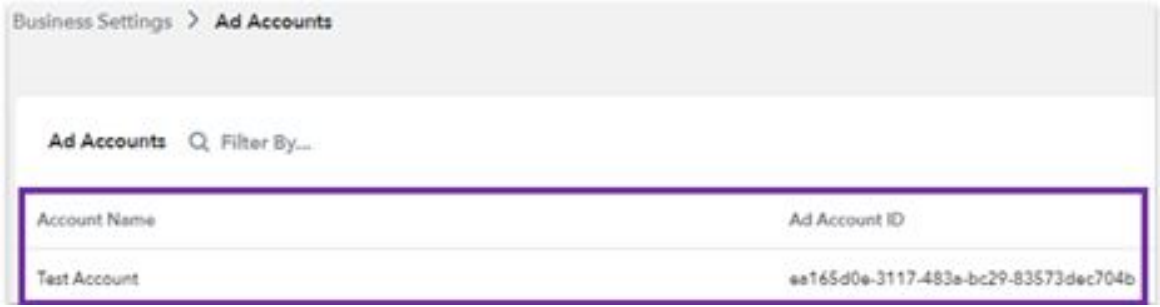

Step 2: Under the Third Party Tagging section, click the checkbox next to DoubleVerify to activate DV tracking for the ad set you wish to measure & click Save.

Activating Viewability & Fraud/SIVT Measurement Within Snapchat

Step 3: Navigate to **Business Settings** > **Ad Accounts**

Step 4: Locate the *Account Names* & *Account IDs* for each account the integration has been activated for and send to your DV Account Manager.

DoubleVerify

PINTEREST VIDEO & DISPLAY VIEWABILITY/FRAUD SIVT

Pinterest Activation Overview

1. Request your Pinterest representative activate your Pinterest Advertiser Accounts for DV measurement.

2. Send your DV AM your Pinterest Advertiser Account IDs and names.

Please indicate the DV Line of Business, Paying Party & whether or not a Partner will need access to the data.

Pinterest does not need to be added as a partner to DV Blueprints. The integration operates outside of the standard workflow.

This integration is activated at the Pinterest Account level.
All eligible campaigns under the account will be activated for measurement.

DoubleVerify

TIKTOK VIEWABILITY/FRAUD SIVT/GEO & BRAND SAFETY/SUITABILITY

TikTok Activation Overview

Viewability, Fraud & Geo

Before proceeding with activation, please validate that the ad unit you wish to activate for DV measurement is supported. The activation process will vary by buying platform.

- Ad Unit: **One Day Max** - Managed by TikTok via **Reservation**
- Buying Type/Ad Unit: **Auction In-Feed** - Self-Service managed via **TikTok Ads Manager [TTAM]**
- Buying Type: **Reach & Frequency -** Self-Service managed via **TikTok Ads Manager [TTAM]**

Note: You do not require tags from DV to activate Viewability, Fraud & Geo measurement for campaigns activated through either Reservation or TikTok Ads Manager.

Brand Safety & Suitability

US Only: If you are interested in leveraging TikTok Brand Safety/Suitability reporting within the US, please reference the **DV / TikTok Measurement Activation Guide** provided by your DV Account Manager for more information.

TikTok Activation Steps - Reservation

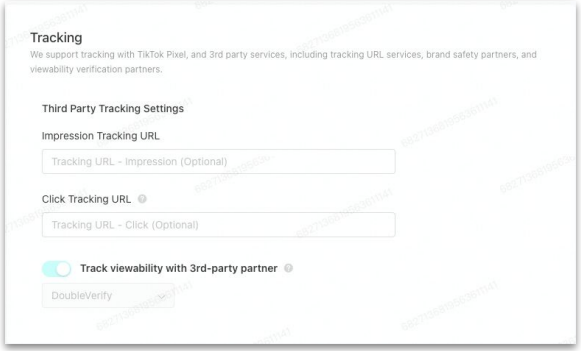

Activating For Reservation - One Day Max

- Reach out to your DV representative as soon as possible to request your DV CTX.
- Share your CTX & TikTok Advertiser ID with your TikTok Account Manager

TikTok Activation Steps - TikTok Ads Manager

Activating For TikTok Ads Manager [TTAM] - Auction In-Feed + Reach & Frequency

1. Reach out to your DV representative as soon as possible to request your DV CTX.
2. Share your CTX & TikTok Advertiser ID with your TikTok Account Manager so your account can be allowlisted for DV measurement
3. Build out your campaign within TTAM
4. Once your account has been allowlisted, toggle on viewability tracking at the **ad level**

NOTE: You must toggle on DoubleVerify measurement prior to the campaign launching. To activate measurement mid-flight, all creatives must be duplicated and then activated.

- DV/TikTok cannot provide data retroactively [prior to activation.]
