Meta Work Account Migration

Gillian Collison | GroupM
Global Social Lead

April 2024

Meta Managed Accounts offer agencies and large clients a centralised place to monitor & control who has access to their Meta business tools including Business Manager. MMA comes with a range of enhanced security features that aim to help keep agencies and their clients safe, especially at a time when attempted attacks by bad-actors are becoming more frequent and sophisticated.

As part of the MMA rollout users will also be required to login to Business Manager using a Meta Work Account via a Single Sign On (SSO) service. **This is a mandatory migration**. There will be a 30 day window to migrate users once invited. GroupM is actively auditing BM environments by market and highlighting areas of non-compliance

Actions Required in Preparation: Audit Users
Market leads should export a user list from Meta and complete

okta

Agency staff with access to Business Manager will be required to set up a **Meta Work Account** and sign in via WPP's SSO provider **Okta.**

Action: Update Meta email addresses now: Any non-compliant users will be blocked.

Clients or 3rd parties with individual access to Business Manager will see their access removed. Teams should start transitioning these user to **Partner Access**

Action: Move clients or external users to Partner access. All Admins to conduct user audit.

Data & Analytics teams that use a shared email to login to Meta's Business Manager (e.g. datateam@groupm.com) will need to replace this with individual user access via SSO

Action: Align setup with D&A Teams or generic emails now (note: choregraph users will be permitted to remain)

Meta emails must match your OKTA login email:
e.g. Any former @mediacom.com users must update their email in Meta Business Manager first to @essencemediacom.com
Some users may have two email addresses – please use the one that is linked to the Active Registry / Okta login.

Onboarding Process:

1. GroupM will reach out to confirm market adoption timelines. Once market leads and admins confirmed they have reviewed all users and moved external users to clients, we will migrate the Business Manager.
    - Only in extenuating circumstances will we delay market migration. If you have rationale, please reach out.

2. Upon migration, all GroupM employees in the Business Manager will receive an email inviting them to sign up to Managed Accounts. If a user has access to 3 business managers, they will receive 3 emails – but the process only needs to be completed once per user and will be applicable to all Business Managers that GroupM owns and has access to.

A Meta account managed by Lucky Shrub is ready for you

Hi,

It's time to activate your Meta account managed by Lucky Shrub!

Your company has created a managed Meta account for you, a way for you to log into Meta business tools using your work email and password or single sign-on (SSO). You won't have to use your personal Facebook account to log in. So you can keep your personal account just that, personal.

Activating your account is easy, and the permissions you have on Meta business tools will be transferred. You can start using your account as soon as you log in.

⚠ Your account must be activated by {date} or you'll be temporarily blocked from using Business Manager.

What happens next?

After you activate your account, you'll need to start updating your third-party apps to use your account log in. You'll have 30 days after you activate to update the third-party apps you use on business tools. Learn more

Activate your account

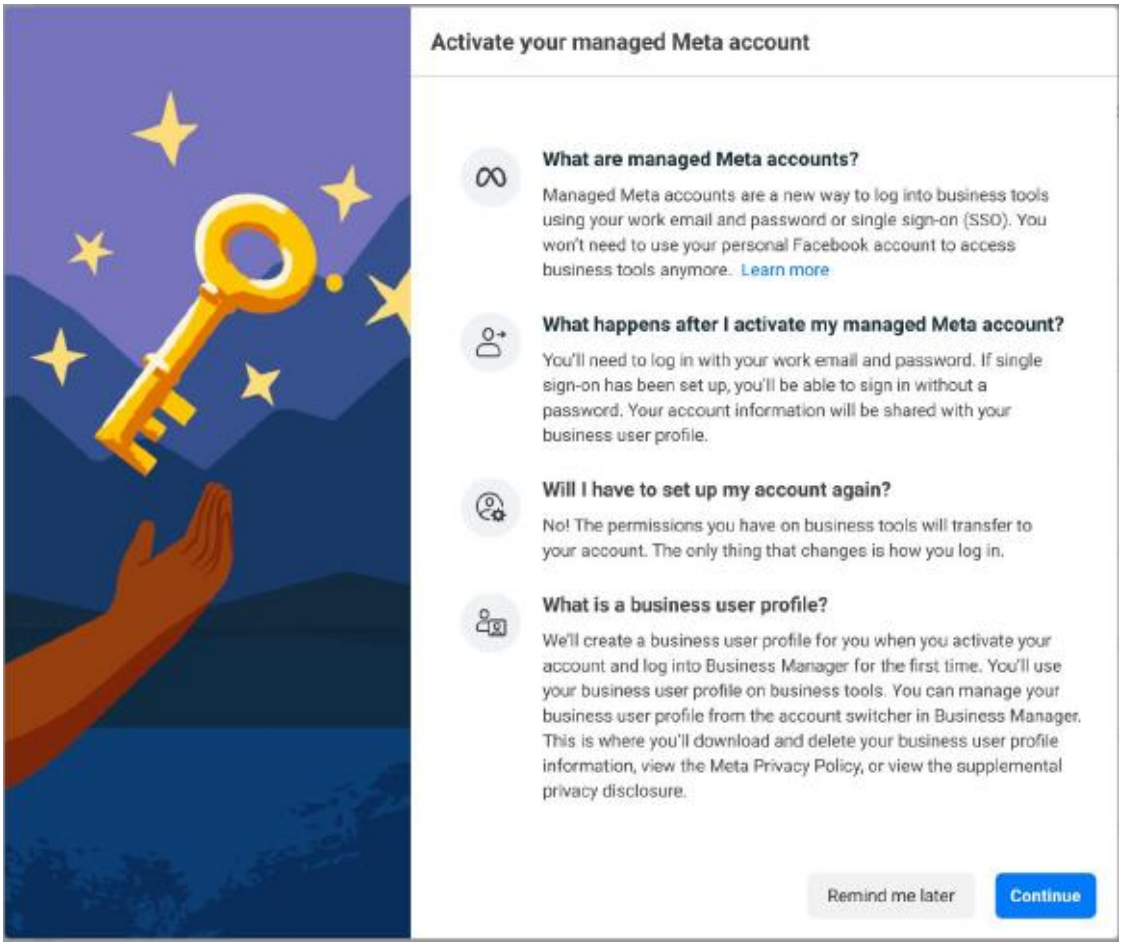

Meta Work Account Migration

Gillian Collison | GroupM
Global Social Lead

Onboarding Process:

Ensure you are logged into Facebook Business/Ads Manager before proceeding.

3. You'll see information about what managed accounts are and what will happen after you activate. Click Continue to keep going.

Onboarding Process:
4. Activate your managed account. You can activate your managed account for all the business portfolios you're in at once. You can see a list of all the accounts you'll be activating for. Click Activate to keep going.

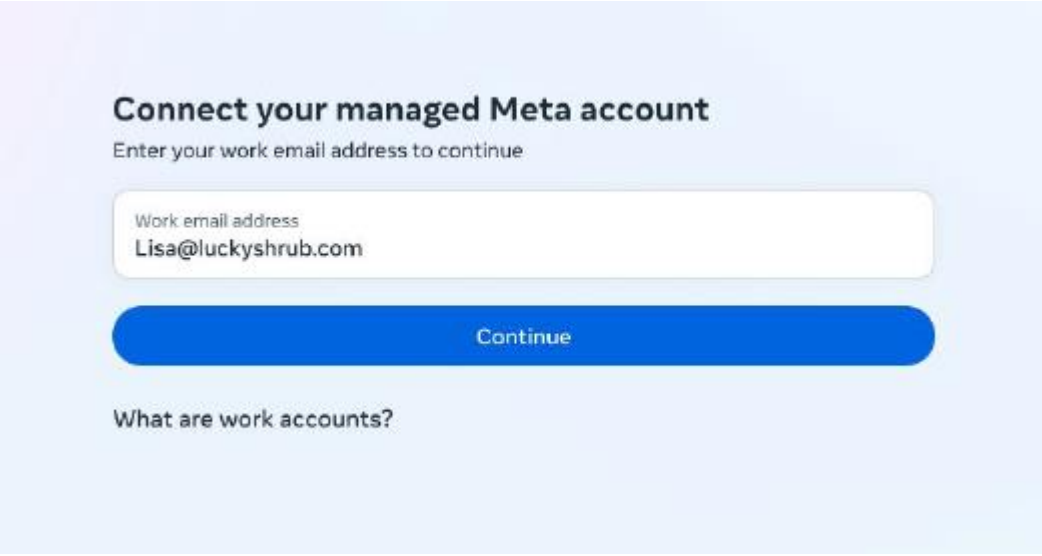

You can only activate for business portfolios that belong to GroupM. If a Business Manager hasn't been claimed yet, and you still see this in your personal access (outside OKTA), please contact Gillian with full control for help

Onboarding Process:
5. Enter your work email to verify it is the same email used to create your managed account (match OKTA).
You will be sent a 6 digit activation code to confirm the process via email.

Meta will prompt you to enter your Date of Birth. Note: This data is only used to confirm that a user is old enough to use advertising features and will not be visible to GroupM. Meta has this information today from your facebook.com profile.

6. You will then be redirected to OKTA single-sign on to confirm your final setup. Once this is done, setup is complete and moving forward you will access Meta via this work account.

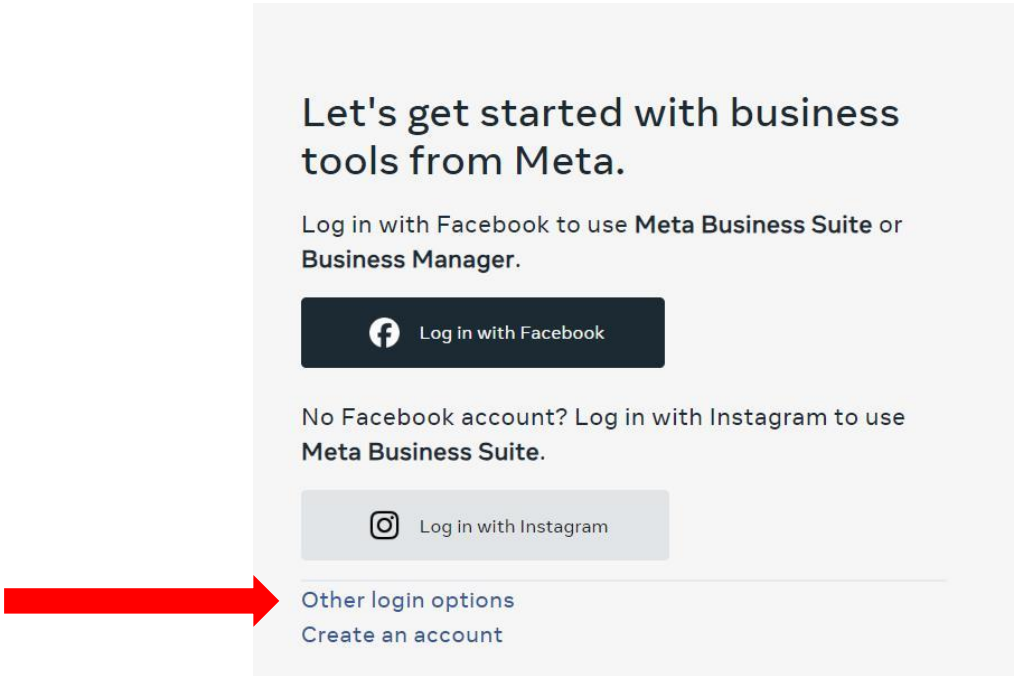

7. Please then remove your work email address from your personal Facebook page.

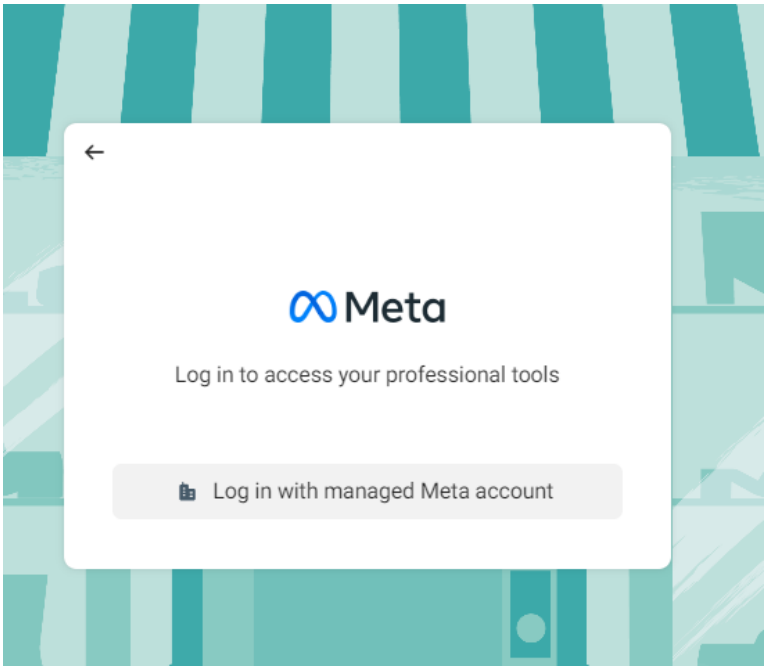

You will log into meta at **business.facebook.com**

Considerations:
Third Party Apps: After activating their managed account, Employees will need update their third-party apps to use their managed account email and password. You will have 30 days to update all the third-party apps in use for the business and still access until that point.
This includes Rosie for Meta (GroupM Automation Tool)

As a reminder – 3rd party app OAuth access is typically NOT approved for GroupM clients. We have a few vendors who are setup/approved on specific clients that can be reconnected if TPA is agreed. (**SprinkIr or CreativeX** for example may have exceptions but can also connect in other ways)

If unsure, please reach out to Gillian Collison and Julia Khin. Moving forward, we will centrally block any 3rd party app that is not approved by GroupM for use so please do not reconnect any tools that you are no longer using or are not approved.

Considerations:

Political or Social Justice Advertising:
Any user who has completed certification with Meta and are approved to run pollical or social justice ads will need to be re-certified by Meta. Please work with your market lead if running these type of ads to ensure at least one user at all times is certified as we go through this migration.

Invites & Active Registry Moving Forward:
Only GroupM employees with Meta Managed Accounts will be able to be invited to Business Manager environments moving forward and is linked to the OKTA Active Directory. Names will populate as long as an email address is active and linked to OKTA. This must be your **primary email address.**

- E.g. @mediafuturesgroup.com is not a primary domain, but essencemediacom.com is – this means MFG teams use their EMC.com email

Users will still need to be removed from Business Manager when they leave the agency manually; their access will be blocked however when they are removed from OKTA login.

Considerations

Service / Non User Accounts

At this time existing 'service' accounts that are used for data ingestion will not be excluded from the rollout and continue to operate HOWEVER no new service/non user accounts will be able to be added to Business Managers moving forward – these addresses must be linked to the active directory for onboarding in future.

More information will be shared on this soon as we work through with IT long-term management.

Considerations

Accessing non-GroupM Business Managers

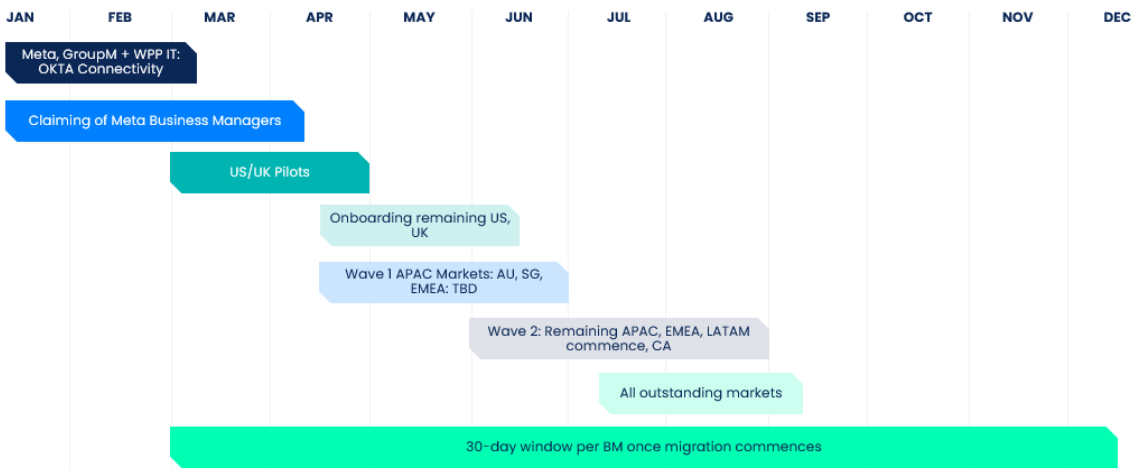

If you are accessing other non-GroupM Business Managers as a user, you will continue to access the environment through Facebook.com login – we are only migrating those environments we own. As a reminder, all access to client-owned environments should be through Partner access. If this is not the case, please work with your social lead to amend.

Employees with MSix or The&Partnership will not be migrated at this time.

Timelines:

Rollout in the US and UK will commence in March 2024 with other key markets to follow from April.

Regional leads will work on market prioritization; however if you believe your market has completed all pre-migration steps, please reach out to Global and we can commence migration sooner.
The migration process per user takes less than 5 minutes.

FAQS/User Access Issues

For users who need to update their email address in Meta before commencing migration –

Log in to your Meta Business Manager > Navigate to your Business Info > Click on 'Edit' under 'My Info'

Update Email > Save changes

I have been invited as a user to a new Business Manager that has migrated users, however my access in other Business Managers I use has not yet updated:

1. Request that your account (For existing BMs) be migrated to MMA (email your regional lead)
2. Visit https://business.facebook.com/settings/?business_id=<business_id>. You should see the migration modal pop up.
3. Complete the migration flow
4. All relevant access to GroupM-claimed portfolios will migrate. This may need to be completed in Incognito mode and we recommend clearing cookies if any issue persists

The <business_id> can be any GroupM-claimed business portfolio if you have been selected to migrate.
